

How to take Photos for Registration

This is one of the important steps when registering your Gypsy Vanner Horse. It is required that you send 4 photos of your horse; one from each side, one direct from the front and one direct from the rear. The **side** photos **must be sized** or able to be cropped so the width is greater than the height. The horse should fill up most of the photo space. The photos are used for registration approval and for identification of the horse. The side photos will appear on the registration certificate. The photos **must be current photos** of the horse.

EXAMPLE of side photos

The entire horse is shown from top to bottom, no part of the horse is cut off or obscured in the photos. The horse is standing on a surface that properly shows the feather, not hidden in grass or snow. The horse does not have to be show groomed, but should be reasonably clean in order to show the feather and markings. With a mature horse with a thick long tail, the tail should be held out of the way in the rear photo so that the leg markings can be seen. The tail may also be braided or tied up instead.

It is preferred that the photos be emailed to registrar@vanners.org. They must be .jpg photos when emailed.
